INFORMATION FOR PHARMACEUTICAL COMPANIES

PEI-C Rebuild – Electronic Transmission of the Batch Release Documents for further Product Groups

Applying pharmaceutical companies can submit their applications for a batch release electronically for both human and veterinary products using the PEI-C rebuild portal on this link: www.PharmNet-Bund.de.

As of 01 January 2022 the Paul-Ehrlich-Institut provides batch release documents electronically for the following product groups:

- Plasmapools
- Immunological medicinal products

The pharmaceutical company can print out the batch release documents from the portal if required. Thus, a separate application for additional uncertified copies will no longer be necessary.

Certified copies can still be applied for via PEI-C Rebuild at an extra cost.
